Money Manager Review, now in its 20th year, has provided in-depth analysis on hundreds of the nation's leading private money managers. It is the largest resource of its kind on the internet, whose clients include thousands of individuals, consultants, plan sponsors, foundations and charities who rely on Money Manager Review to find, compare and analyze private money managers. We have provided Money Manager Review the average return for an average portfolio of similar objectives for ten years. Here is how they have ranked these objectives relative to other managers they consider similar to us. They rank managers by the amount of return, the amount of measurable risk taken and on the efficiency of the manager, i.e., the return relative to the amount of risk taken. Past performance does not guarantee future results. All investing involves risk. Principal loss is possible.
